Rohithraj Baskaran

baskaranrohithraj@gmail.com — github.com/rohithrajbaskaran — portfolio — +1(647)425-4850
linkedin.com/in/rohithraj-baskaran-89029820b/ — Toronto, ON

Technical Skills

Languages: Java, Python, JavaScript, TypeScript, C#, C++, SQL, HTML5, CSS3, Bash
Frameworks & Libraries: React, Node.js, Express.js, Flask, TailwindCSS, REST APIs, GraphQL, JUnit, Cypress
Databases: PostgreSQL, MySQL, MongoDB, Oracle, Redis, pgvector, Schema Design, Query Optimization
Cloud & Tools: AWS, Docker, Git, GitHub, GitHub Actions, CI/CD, Linux/Unix, Vercel, Postman, JIRA, Azure DevOps

Experience

Software Engineer (Application Engineer) — Plutus Consultancy September 2025 – December 2025
Python — Flask — PostgreSQL — pgvector — React — REST APIs — Linux — Git

- Designed, developed, and shipped an AI-powered semantic search platform in Python and Flask, implementing REST API endpoints and vector similarity search over PostgreSQL/pgvector that reduced incident search time by 20%+.
- Built and maintained backend services and React frontend components across the full software development lifecycle, collaborating with 3+ cross-functional teams in an Agile/Scrum environment to ship features and resolve production defects.
- Automated data ingestion and ETL workflows with Python scripts, cutting manual processing effort by 60% and improving data integrity and consistency across services.
- Deployed and maintained cloud-hosted applications on Linux servers, owning end-to-end configuration, release deployment, performance troubleshooting, and monitoring.

Software Engineering Intern, Quality Engineering — EatMe Global June 2019 – September 2019
JavaScript — Java — Cypress — JUnit — Enzyme — REST APIs — Redis — Linux — Git

- Developed automated regression and integration test suites in JavaScript and Java (Cypress, JUnit, Enzyme) for a React, Node.js, GraphQL, and PostgreSQL web application, reaching 92% code coverage and reducing post-release defects by 25%.
- Translated functional requirements into technical specifications and test scenarios spanning functional, integration, and UAT testing across the SDLC.
- Debugged and validated Redis caching, JWT authentication, and REST/GraphQL API integrations to deliver secure, low-latency application workflows.
- Triaged and root-caused defects to resolution with engineering leads using Git-based workflows, supporting release readiness and faster delivery cycles.

Projects

AI-Powered ITGC Audit Assistant 2026
Python — LangGraph — Claude API — Pandas — Streamlit — Git — GRC Frameworks

- Built a multi-agent AI system in Python to automate ITGC testing, mapping findings to COBIT 2019 and NIST CSF 2.0.
- Automated detection of orphaned accounts, MFA gaps, and unapproved changes across records, cutting review time.
- Added AI governance controls, including human-in-the-loop review and audit trails, aligned with the NIST AI RMF.

RAG Pipeline for IT Incident Resolution November 2025 – December 2025
RAG Systems — React — Node.js — Express.js — MongoDB — all-MiniLM-L6-v2 embeddings — REST APIs — Git

- Engineered a Retrieval-Augmented Generation (RAG) pipeline for IT incident resolution.
- Embeds and stores the incident description as vectors using all-MiniLM-L6-v2 and on query does cosine similarity search on the stored vectors to return the best match with a confidence score.
- Developed a full-stack web application with React, Node.js, Express.js, and MongoDB, implementing scalable RESTful API endpoints for incident creation, tracking, and lifecycle management.

Automated Job Application Engine July 2026 – August 2026
JavaScript — Chrome Extension (Manifest V3) — DOM APIs — HTML5/CSS3 — JSON — Git

- Built a Manifest V3 Chrome extension in JavaScript automating job applications via a heuristic field-matching engine (25+ regex classifiers for label, ARIA, placeholder), cutting form entry time from minutes to seconds.
- Engineered DOM parsing using container containment and positional pairing to detect and fill repeated sections like employment history.
- Architected the extension (popup UI, content script, service worker) with native-setter injection and fuzzy matching for React/Vue compatibility.

Education

Toronto Metropolitan University (formerly Ryerson) - Toronto, ON January 2023 - September 2025
Bachelor of Science (B.Sc.) in Computer Science
Relevant Coursework: Data Structures & Algorithms, Software Engineering, Web Development, Systems Programming, Operating Systems, Machine Learning, Computer Networks & Security, Database Design, UX Design.

AWS Certified Cloud Practitioner May 2025
